

MOULEX[®] WE 04A

Anti-blocking additive

GENERAL

MOULEX[®] WE 04A is an anti-blocking additive, used as an internal/external release agent. It is very efficient for resins in aqueous system like phenolic, UF and MUF resins.

MOULEX[®] WE 04A is very suitable to avoid stick between the sheets of impregnated paper due to variation of temperature and humidity during production and storage.

PHYSICAL PROPERTIES

Appearance	: viscous liquid
Colour	: white
pH	: 8 ± 1
Active content	: 25 ± 3 %
Water solubility	: soluble
Shelf life	: 1 year if stored in closed container and protected from frost

RECOMMENDATION FOR APPLICATION

1. As internal additive:

The usual dosage varies between 0.1 and 0.2% on the glue.
We recommend generally adding into the second bath.

2. As external agent:

Dilute **MOULEX[®] WE04A** between 2% and 4% in soft water.
Spray on the impregnated paper just before the dryer.

PACKAGING

Container of 1000 litres

After delivery, use and storage of our products not being under our control, we decline any express or implicit responsibility as to their behaviour.
